PROFESSIONAL EXPERIENCE

SparkSoft Solution, Inc. **Remote**
Software Engineer *June 2024 – April 2026*

- Architected and deployed a full-stack attendance management system using Next.js 14, TypeScript, and AWS Amplify, successfully supporting 15,000+ employees.
- Engineered real-time biometric hardware integrations and automated data export pipelines, reducing HR administrative processing time by 75%.
- Developed a high-performance enterprise analytics dashboard featuring geofenced tracking and multi-format reporting for workforce optimization.
- Hardened system security by building a Node.js/Express backend with AES-encrypted QR decryption, GraphQL integration, and a secure S3 proxy for sensitive data

GuestPulse. **Remote**
AI/Analytics Engineer (Independent Contractor) *Dec 2025 – Feb 2026*

- Developed a sophisticated AI hotel analytics assistant using Next.js 15 and PostgreSQL that translates natural language into complex SQL queries and real-time visualizations.
- Designed a 3-level deterministic routing engine with O(1) keyword indexing and fuzzy matching, accurately classifying queries across 7 specialized handlers for 4 distinct hotel datasets.
- Integrated an LLM layer (Ollama/OpenAI) to provide context-aware reasoning, automated narrative insights, and proactive follow-up suggestions.
- Built a semantic catalog with O(1) keyword indexing, fuzzy matching, typo detection, and 17 paraphrase patterns for natural language understanding

MindScript Technologies LLC **Remote**
Full Stack Developer (Independent Contractor) *Sept 2025 – Nov 2025*

- Engineered a specialized medical consultation platform integrating Claude LLM, designing complex system prompts and deterministic logic flows to guide AI behavior for over 100+ healthcare consultants Agent.
- Developed and managed high-performance endpoints using Python (FastAPI), ensuring rapid data retrieval and seamless communication between the LLM and the frontend.
- Implemented global localization features, enabling the AI and platform to support multiple languages for diverse patient-consultant interactions.
- Refactored a legacy React.js codebase, transforming "spaghetti code" into a clean, modular architecture, which significantly improved maintainability and reduced bug reports

TECHNICAL SKILLS

Programming Languages: Python , Node, C++, JavaScript, Typescript, FastAPI, PHP, HTML/CSS, C++,
Technologies/Frameworks: React.js, Next.js, REST APIs, Git, AWS Amplify, S3, Postgres, DynamoDB,
AI/ML: OpenAI API, Ollama, LLM Integration, NLP, Prompt Engineering, HuggingFace, OpenCV, YOLOv8
Developer Tools: Visual Studio Code, Vitest, Playwright, MySQL, GraphQL, GitHub, Claude Code, Cursor

EDUCATION

Western Mindanao State University **August 2020 - May 2024**
Bachelor's, Computer Science *Zamboanga City, Ph.*

- Academic award, Best in Portfolio
- OOP, Data Structures, Algorithm, Software Engineering, Database System,

PROJECTS

GuestPulse – AI Analytics Assistant | TypeScript, Next.js 15, PostgreSQL, Ollama, OpenAI, Recharts, Vitest
AI Developer

- Engineered a natural language-to-SQL engine that enables non-technical users to query 4 distinct hotel datasets via an intuitive chatbot interface.
- Optimized query performance by implementing a semantic catalog with O(1) keyword indexing and 17 unique paraphrase patterns for robust intent detection
- Ensured high system reliability through a suite of 200+ Vitest integration tests, maintaining stability across a 34K+ line TypeScript codebase.

Smart Entry Gate Security System | *Python, ttkbootstrap, OpenCV, YOLOv8, Tesseract_OCR, Sqlite3 Full Stack Developer -github*

- Led the development of an automated security gateway achieving 95% accuracy in real-time facial and license plate recognition.
- Designed an interactive GUI using ttkbootstrap, which improved operator efficiency and increased user satisfaction by 30%.
- Automated security compliance by building a customized reporting module that logs all visitor data into an SQLite database for instant auditing.

Quezon City QR ID Verification| *Node.js, GraphQL, AWS S3, AES Encryption, React, CORS Full Stack Developer - verify-QC-employee-ID*

- Developed a secure verification API utilizing AES-encrypted QR codes and tokenized S3 image proxying to protect employee data.
- Implemented enterprise-grade security layers including SSRF protection, input sanitization, and rate limiting to prevent brute-force attacks.
- Streamlined HR validation processes for Quezon City by delivering a robust, dynamic image-serving frontend.
